Volunteer posting

Are you passionate about technology? Do you want to spark creativity in the next generation of digital creators? Become a Code Club Mentor today! Clubs need mentors with different skills and backgrounds to encourage young creators in coding games, animations and websites. No coding experience necessary!

Aims and expectations: A mentor supports and encourages young people to participate in activities across the session. They may also prepare learning resources or activities for sessions.

We provide free resources such as project guides, certificates, and posters, and we offer support through online workshops, community events and ongoing guidance.

Tasks:
- Welcome attendees as they arrive at the sessions
- Encourage young people to participate in session activities
- Help to plan and prepare resources ahead of club sessions
- Provide support to young people who are new to coding
- Provide technical guidance to help young people progress with their projects
- Help to set up technical equipment before sessions

Benefits of mentoring:
- Learning new skills for fun or professional development
- Meeting new people and making friends
- Helping young people develop skills for the future
- Giving back to your local community
- Sharing your knowledge, passion, and experience

All volunteers must attend mandatory safeguarding training and obtain a clear background check. Digital Moment will cover the cost of the background check.

Time Commitment: 2 hours of training and onboarding, plus attendance at sessions according to your schedule. Sessions usually are 1 hour per week for 6-8 weeks.

To Apply: email volunteers@digitalmoment.org or fill in our website form: https://www.digitalmoment.org/volunteer-code-club#section-volunteer-codeclub
